

M-Machine

The vertical solution to manage the machines that you manufacture, use and assist, by remote.

Just enter your dedicated web-site page and visualize information about performances, functioning, usage conditions, consumptions, refillment, anomalies and breakdowns.

Wherever you are, by pda or mobile phone.

M-Machine is scalable. You can even decide to add the M-Fleet service, the solution for the fleet management, so as to schedule and organize your technicians' activities and trips.

➤ Alarm calls: web, sms, e-mail, fax

Whenever an emergency situation arises, machines instantaneously send alarm calls to a list of addressees, via sms and/or e-mail.

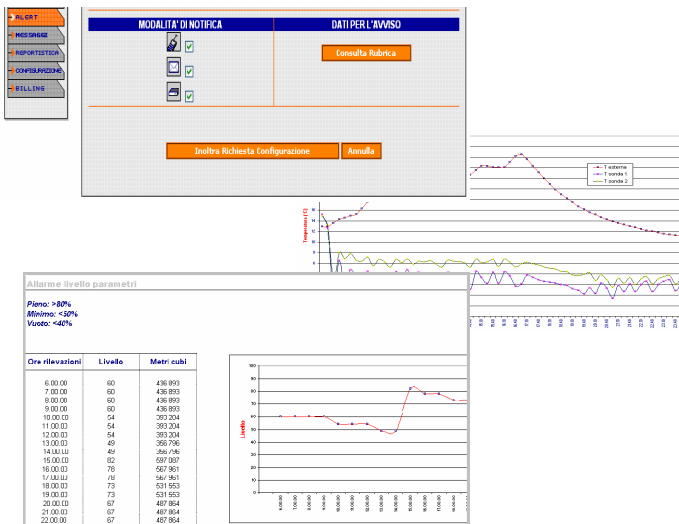

Examples of alarms are:

- Min/max level of any physical value (pressure, temperature, levels, ...)
- Machine alarms
- Attempted tampering
- No communication with the Control Unit
- No power supply
- On/off Control Unit alert

Information is stored to enable new reading and monitoring.

Entering the ALERT menu, you'll read operational and break-down alarms.

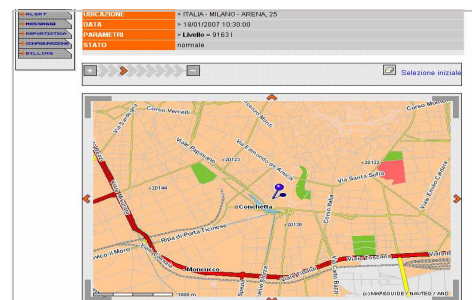

Alert levels are easy to be configured.

➤ Historical working data

Entering the REPORT menu, you access historical data of each individual machine. Information is converted into the customer's required electronic format and is available for new reading, use and download.

Movactive collects, processes and stores data, preserving customers from local recording and infrastructure management costs.

➤ Two-way communication

Connection to the serial port allows transparent interaction with all machines. Technicians will operate as if they were straight in front of the machine itself.

From the STATUS menu, virtual control panel can be selected to display real-time information, such as:

- instantaneous values (i.e.: pressure, temperature, levels..)
- Date and time
- Positioning on georeferentiated maps
- warning notifications
- Other customised information

Infos are listed chronologically, to get ready for new, rapid retrieval -through advanced research filters- and immediate use.

Benefits

Invisible technology

Improved production

New services, new profits

Resolute repair service

Maintenance only when needed

Remote assistance at no costs

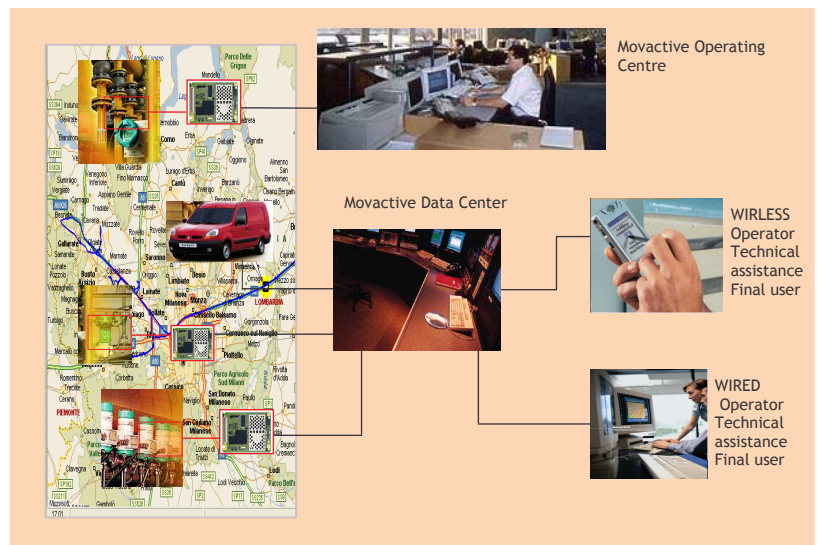

Cut costs

Integrate data into company software

Outsourcing

Scalability

Architecture

► Integrated fleet management with M-Fleet

Movactive, first on the market, provides the perfect integrated management of assisted machines and technicians' vehicles.

Alarm calls and warning notifications automatically schedule technicians' working agenda.

For further information, please ask our M-Fleet brochure and contact the Movactive sales office.
